## MEMORANDUM FOR THE RECORD

SUBJECT: Justification for Production of Basket Assemblies for Model 1 Air-Fed Incinerator

1. The basket assembly is a very important part of the over all optimum operation of the air-fed incinerator. It serves the purpose of preventing any large pieces of fly ash or unburned paper from escaping through the stack above the incinerator. Without this assembly this incinerator is virtually useless in the operation for which it was designed.

2. [ ] is presently engaged in the fabrication of ten (10) Model 1 Air-Fed Incinerators. It is desired, at this time, to have fabricated two (2) additional basket assemblies (Drawing #354-111). These units will be used as spares for the incinerators presently located at [ ] and Quarters Eye. The cost for procuring these basket assemblies is \$449.00. It is recommended that immediate procurement be made in accordance with the provision of the proposal from [ ] dated 28 September 1961. In this way we can take advantage of these units being included in the overall production. Costs should be charged against Allotment Number 2589-0680-0060 Stock Procurement Account of TSD Material. Delivery can be delayed to coincide with the shipment of the other material in order to reduce these costs.

3. The contract with [ ] will be Agency sterile. The items per se are unclassified. Agency interest in all work and material under the contract is classified Secret and may be divulged only on a need-to-know basis to appropriate security approved personnel.

4. Further information regarding this request may be obtained by contacting [ ] Room 210, West Outbuilding, [ ]
